

2023 *Preventive Medication List*

SecurityHealth PlanSM

Promises kept, plain and simple.[®]

Introduction

In addition to a healthy lifestyle, preventive prescription drugs are important in helping people avoid many types of illnesses and complications from illnesses. This book contains a list of the most commonly prescribed preventive prescription drugs. It does not include all conditions that may be prevented with prescription drugs. The prescription drugs listed here serve to maintain a person's health status and help them avoid acute complications. This list is not all-inclusive and is subject to change.

Important facts about this benefit

- Quantity limits, step therapy, prior authorizations and other coverage limitations^{*} may apply on select products. Please refer to the formulary for the most current limitations.
- Quantities are limited to a maximum 3-month supply per fill.
- Tier 3 medications listed in the Security Health Plan Formulary are not routinely placed on the preventive list.
- If a generic equivalent product is available, the originator brand medication will not be covered (Example: simvastatin is covered, Zocor[®] is not).
- This list is updated annually on a calendar year basis.

The covered preventive drugs are divided into medication categories. Drugs are considered preventive by Security Health Plan when taken by a person who has developed risk factors for a disease that has not yet become clinically apparent (e.g., blood pressure or cholesterol drugs to prevent heart attack or stroke). Taking these medications as directed by your prescriber can help avoid serious health problems.

Note: Please refer to your plan documents for specific information on the coverage of preventive medications.

You can view your Summary of Benefits and Certificate of Coverage or Policy online when you log in to your My Security Health Plan account. If you don't have an account go to www.securityhealth.org/registration.
