

2025 *Preventive Medication List*

Introduction

Please refer to your plan documents for specific information on the coverage of preventive medications.

In addition to a healthy lifestyle, preventive prescription medications are important in helping people avoid many types of illnesses and complications from illnesses. This book contains a list of the most commonly prescribed preventive prescription medications. It does not include all conditions that may be prevented with prescription medications. The prescription medications listed here serve to maintain a person's health status and help them avoid acute complications. This list is not all-inclusive and is subject to change.

Important facts about this benefit

- Quantity limits, step therapy, prior authorization and other coverage limitations may apply on select products. Please refer to the formulary for the most current limitations.
- Quantities are limited to a maximum 3-month supply per fill.
- Tier 3 medications listed in the Security Health Plan formulary are not routinely placed on the preventive list.
- If a generic equivalent product is available, the originator brand medication may not be covered (Example: simvastatin is covered, Zocor® is not).

The covered preventive medications are divided into medication categories. Medications are considered preventive by Security Health when taken by a person who has developed risk factors for a disease that has not yet become clinically apparent (e.g., blood pressure or cholesterol medications to prevent heart attack or stroke). Taking these medications as directed by your prescriber can help avoid serious health problems.

You can view your Summary of Benefits and Certificate of Coverage online when you log in to your *My Security Health Plan* account. If you don't have an account, go to www.securityhealth.org/registration.
